About Us

Serviio is developed by Petr Nejedly, who currently lives in London and works as a freelance Java consultant.

Serviio is a free media server. It allows you to stream your media files (music, video or images) to renderer devices (e.g. a TV set, Bluray player, games console or mobile phone) on your connected home network.

There is also a paid for Pro edition which further enhances the possibilities of sharing content in your connected household.

Serviio works with many devices from your connected home (TV, Playstation 3, XBox 360, smart phones, tablets, etc.). It supports profiles for particular devices so that it can be tuned to maximise the device's potential and/or minimize lack of media format playback support (via transcoding).

Serviio is based on Java technology and therefore runs on most platforms, including Windows, Mac and Linux (incl. embedded systems, e.g. NAS).

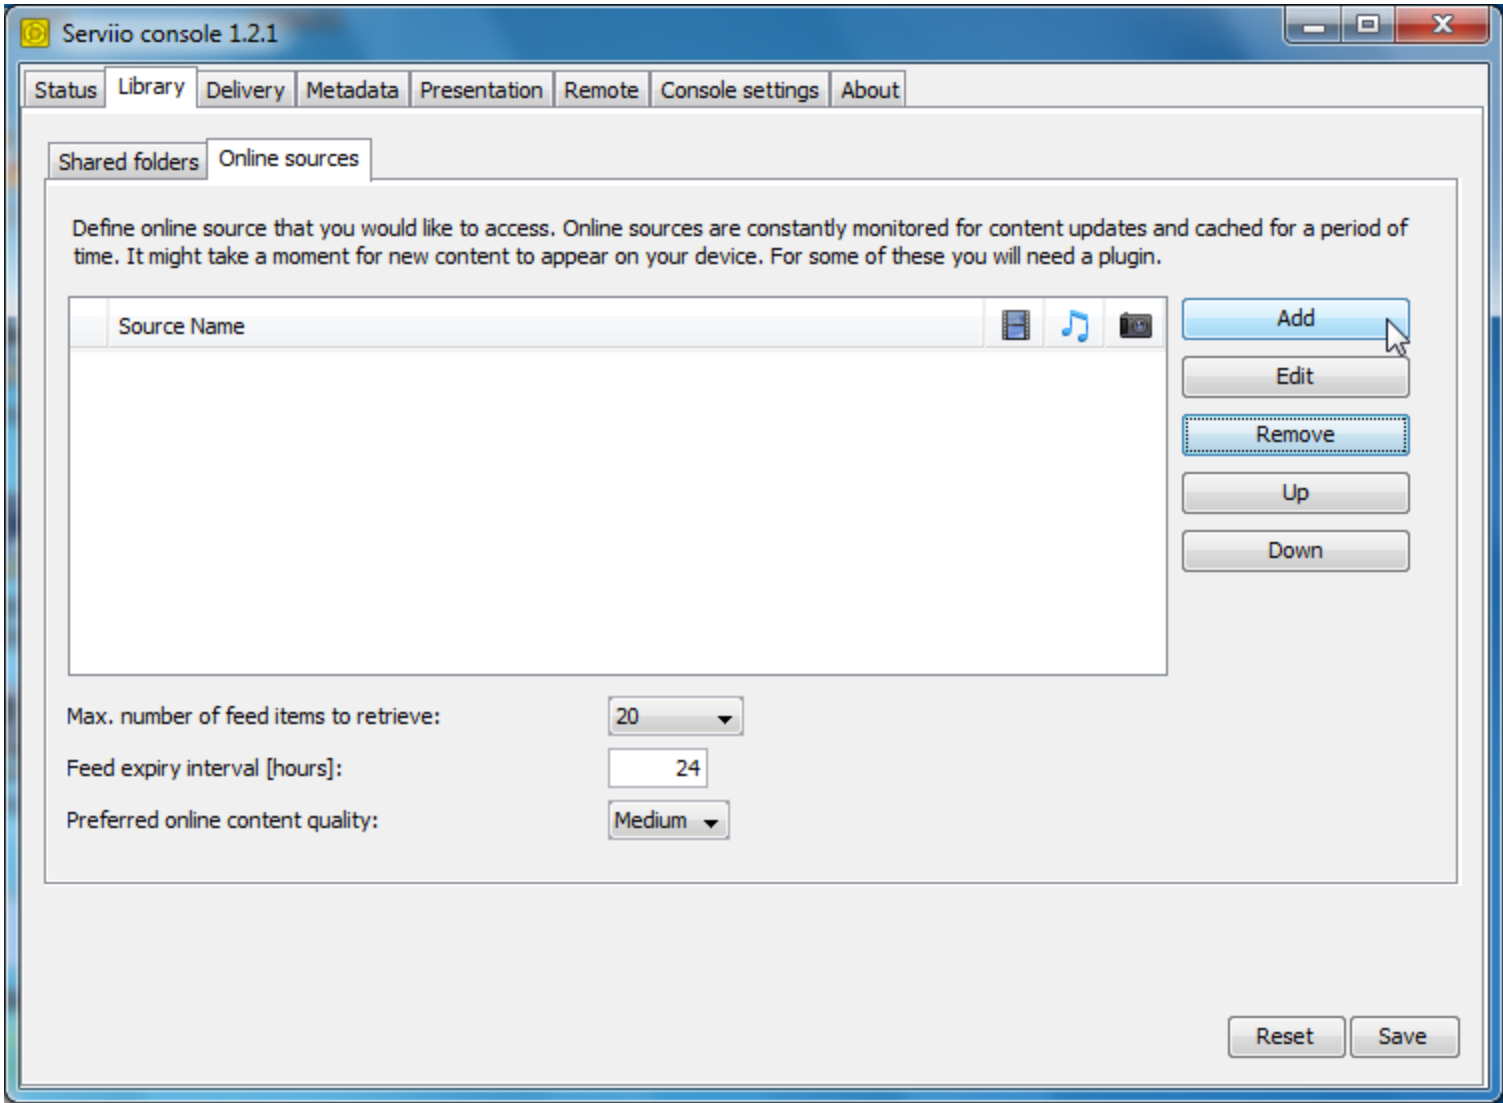

On the Go

Access your files anywhere with Pro edition. Use MediaBrowser or one of the Apps to enjoy your content over the Internet.

Web on Big Screen

Serviio enables playback of online sources like RSS feeds, live streams or web site content so that you can listen to your favourite podcasts or

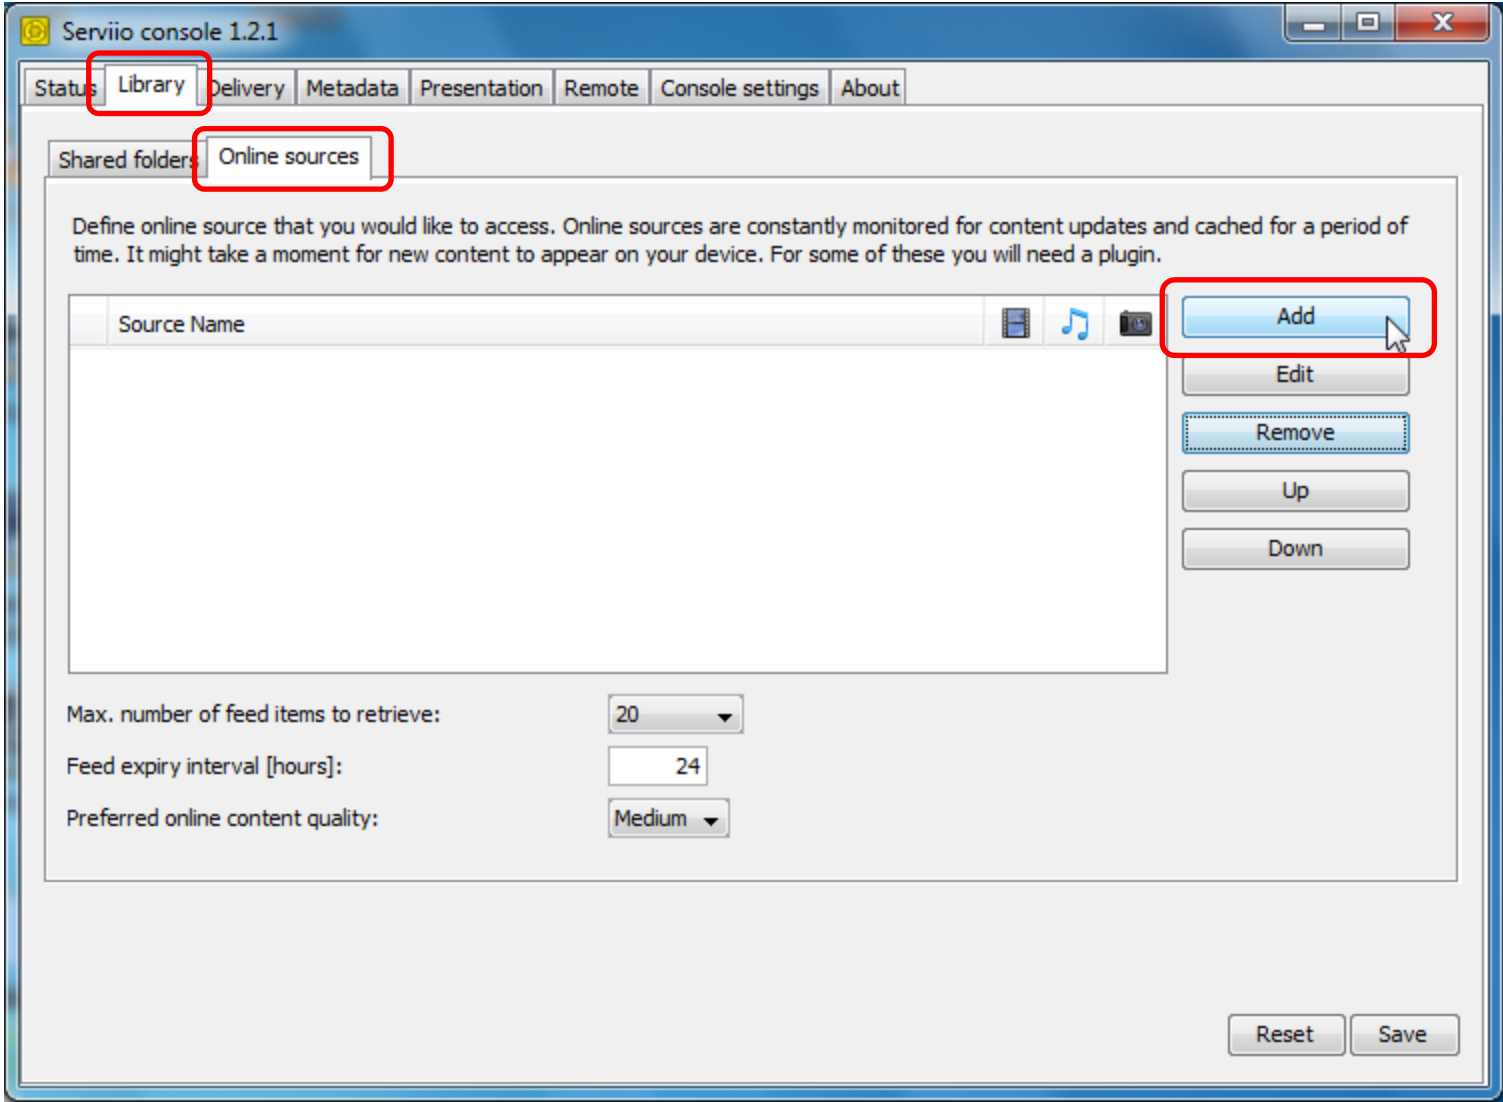

1. Complete DLNA Serviio setup, and then start Serviio console.

2. Double click NetBroadcaster.exe to run, then click [ START ] to create RTSP.

### 3. Add new RTSP streaming to Serviio console.

4. You need add IP address on the Source URL.

Enter details of online source

Enter details of the required online source. Select the source type, enter URL of the source and pick type of media the source provides.
